.Java- what you are coding

.class- what the computer understands, gets produced when making a java file.

Know vocab and and slide 8 of review

Keywords- Don't use as a variable name.

If you put final in front of a int declaration you can never change the value of the int. It is a constant.

Methods

Public- Can be accessed ANYWHERE in the program

Private- Can only be accessed within the class it was created.

Static- Makes a class variable. If not it's a object variable

Instance vs class variable

Instance variable: object variables, each object has their own instance variable. Can only change one object.

Class variable: Blueprint variables, will change everything. Uses keyword static

Composition- something has a or is a relationship
